

PMAP Final Report
Pest Management Solutions to Sustain High-Value Florida Vegetable
Production
USDA Agreement No. 98-34381-6856

Table of Contents	
	Page
Chapter 1. Executive Summary and Major Research	1
Chapter 2. The Evolution of Tomato Pest Management System and Impacts on Pesticide Use and Reliance	9
Factors Shaping IPM Systems and Decision-making on the Farm	9
The Importance of Individual Preferences and Experience in Pest Management	11
Remarkably Intensive Fungicide Use was Common in the Early 1980's	12
Significant Differences Persist in Pesticide Use in the late 1990's	14
Impacts of Changes in Pesticide Regulation Policy and Product Labels	18
The Impacts of Change in Pest Complexes	20
References	25
Chapter 3. The Evolution of South Florida Pepper Pest Management Systems and Impacts on Pesticide Use and Reliance	27
Factors Shaping Pepper IPM Systems and Decision-making	28
Impacts of Farm Manager Experience and Philosophy on Pesticide Use	31
References	38
Tables	39
Figures	44
Chapter 4. Pest Management Alternatives for Key FQPA Targeted Pesticides	47
Sweet Corn Pest Management Using Alternative Pesticides	47
Silicon Nutrition in Disease Management	49
Triggering or Reinforcing Systemic Acquired Resistance in Disease Management	57
References	67
Tables	68
Figures	114
Chapter 5. Measuring IPM System Evolution and Performance and Isolating the Impacts of the FQPA	137
Dietary Risk Arising from Tomato Pest Management Systems	139
Tomato Pest Management Systems and Pesticide Use	142
Assessing Trends in Pesticide Use and Risk	153
References	161
Tables	162
Figures	183
