

**SBIR Phase II Final Report
Commercial Implementation of Biointensive
IPM in Pepper Production Systems
SBIR Project No. FLAK-9703371**

Table of Contents

	Page
Summary	2
Work Area #1 – Refuge and Cover Crop Plantings for Beneficial Insect Habitats	4
Project 1: Determine the Suitability of Field Border Plantings and of Cover Crop Plantings Within the Crop as Nursery Areas for Beneficial Insects	4
Project 2: Ratios of Pepper Crop to Cover Crop or Border Plantings	6
Project 3: Determine Whether Cover Crop Plantings Will be Additional Sources of Pest Problems	7
Work Area #2 – Crop and Non-Crop Insect Survey	8
Project 1: Determine the Seasonal Distribution and Relative Abundance of Insect Pests and Associated Beneficial Insects	8
Project 2: Investigation of the Biological Characteristics of <i>Orius insidiosus</i>	10
Project 3: Define Desirable Population Levels of Beneficial Insects	13
Work Area #3 – Biointensive Management of the Pepper Weevil	14
Project 1: Survey of Biological Control Agents for Pepper Weevil	14
Project 2: Efficacy of Biologically Compatible Insecticides: Evaluation of Prokil Cryolite 96 in Controlling Pepper Weevil	15
Project 3: Mass Production and Augmentative Release of Pepper Weevil Parasitoids	16
Project 4a: Use of Pepper Weevil Aggregation Pheromone: Field Performance of a New Pepper Weevil Pheromone Formulation	16
Project 4b: Monitoring Pepper Weevils With the Improved Lure System	19
Project 5: Pepper Weevil Trap Design	21
Project 6: Role of Nightshade in Pepper Weevil Lifecycle	22
Work Area #4 – Biointensive Management of Broadmites	25
Work Area #5 – Manipulation of Other Beneficial Populations	25
Project 1: Augmentative Release Trials with <i>Coleomegilla maculata</i> on Peppers and Selected Weedy Hosts	25
Work Area #6 – <i>Beauveria bassiana</i> Strain Screening	26
Work Area #7 – Lowering Costs With Biointensive IPM	27
Work Area #8 – Pesticide Efficacy Testing	28
Project 1: Shifts in Pesticide Usage	28
Work Area #9 – Thrips Management and Taxonomy Software	28
Acknowledgements	29
